

RESPONSE

Our Dynamic 24/7 Console Solution The Ultimate Sit-Stand Mission Critical System

The ultimate solution for the 24/7 command and control room operation, the Response™ console provides a unique ergonomic approach for this demanding environment. The Evans Response™ sit-stand approach to solving the ergonomic challenges of the control room is simple: allow the environment to respond to the needs of the user.

By combining electrically actuated sit-stand functionality with the dynamic variability of the optional Unity Monitor Arm™, Evans gives the end user complete command of their work environment at the touch of a button! With a tough modular and space age structural polymer frame, the Response™ console is made for the toughest 24/7 environments, and is becoming the solution of choice in mission critical and 911 facilities worldwide.

Ergonomically designed to help promote blood circulation and improve user alertness, the sit-stand Response™ is changing the console industry. As the implementation of such ergonomic standards have been shown to enhance the health, efficiency and productivity of users, the Evans Response™ is truly in a class of its own!

Design Features

Designed for 24/7 Environments

Rugged structural construction based on the Axiom™ injected polymer platform ensures incredible frame strength. Durable laminate work surfaces and external polymer panels are built to withstand even the most intense day-to-day rigors.

Touch-of-a-Button Sit-Stand Flexibility

Surface mounted dual safety switches allow touch-of-a-button work surface height adjustment while durable factory tested lift mechanisms provide extended life. This ensures the Response™ will function safely and effectively exactly when you need it to.

Dynamic Unity Monitor Arm™ (Optional)

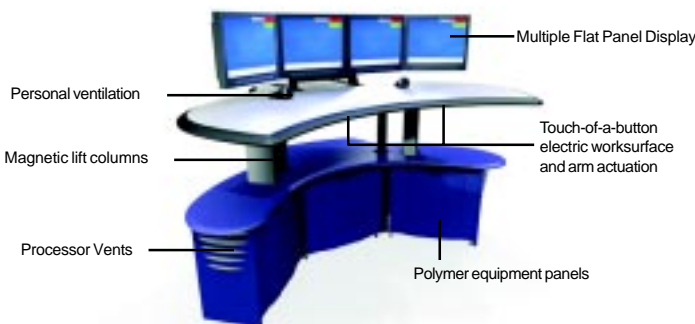

This patented design is the only one of its kind and capability. It offers a standard four flat monitor display array with the option of up to eight, and features touch-of-a-button electrically actuated tilt and height adjustment capabilities. With effortless forward and back glide-track movement of the entire arm, operator comfort and proper ergonomics are easily achieved in either a sit or stand position.

Equipment and Cable Management

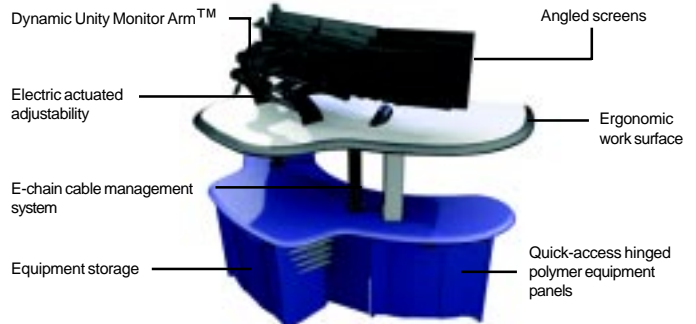

The modular structure of the Response™ provides for efficient equipment and cable management necessary in any mission critical environment. Cables running to work surface-mounted devices are routed through an E-chain articulating cable management system, permitting clean and efficient routing and bundling. Easy equipment access is achieved through structural polymer front and rear hinged panels.

Operator Comfort

As an utmost design priority, the Response™ can incorporate numerous available operator comfort options such as an environmental control unit (Johnson control), personal ventilation, radiant heat panel, white noise, task lighting and more.
